Hyponormal Toeplitz operators on the Drury-Arveson spaces

Jongrak Lee (Sungkyunkwan University, Seoul, Republic of Korea)

In this talk, we will consider the hyponormality of Toeplitz operators on the Drury–Arveson space. First, we present properties of hyponormal Toeplitz operators with two-variable symbols. Then, we extend the discussion to hyponormal Toeplitz operators with n-variable symbols.

The talk is based on joint work with Sumin Kim.
